rsfa ybeb proteins are conserved ribosomal silencing factors
may 13th, 2020 - the ybeb duf143 family of uncharacterized proteins is encoded by

almost all bacterial and eukaryotic genomes but not archaea while they have been shown

to be associated with ribosomes their molecular function remains unclear here we show

that ybeb is a ribosomal silencing factor rsfa in the stationary growth phase and during

the transition from rich to poor media," **download Molekulare Genetik**
